Hydrogen Sulfide (H_2S) Sensor (P/N 714)

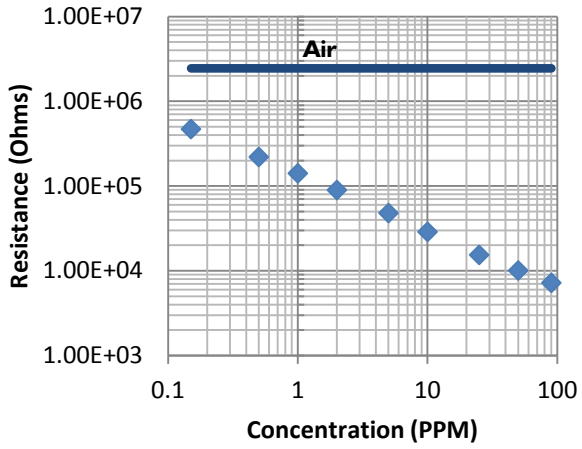
Synkera Technologies, Inc.
2605 Trade Centre Ave., Ste. C
Longmont, CO 80503

SENSOR FEATURES:

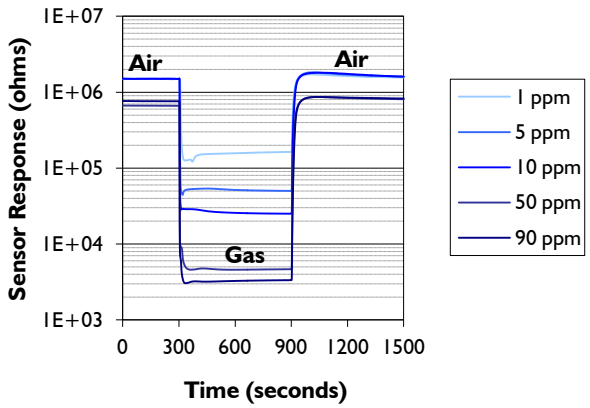
- Sensor designed to reliably detect H_2S at concentrations from 0.15-100 ppm.
- Rugged sensor undamaged by exposure to temperature and humidity extremes.
- Fast response and complete recovery after H_2S exposure.
- Large, stable, easy to measure resistance change on exposure to H_2S.
- Sensor response is stable (does not go to sleep).

SENSOR RESPONSE CHARACTERISTICS

The figures below show typical response data for sensors operated in clean, dry gas.



Linearity of sensor response to H_2S. Different cylinders used for low and high concentration testing.



Sensor response curves for varying H2S concentrations. H_2S introduced at t=300 seconds, and removed at t=900 seconds.

ELECTRICAL CHARACTERISTICS

The electrical properties below are typical for the H_2S Sensors. If the actual values differ, the customer will be notified with the shipment. Circuits are available that will be preset to the correct values.

PROPERTY	*SYMBOL*	*VALUE*	*REMARKS*
Heater Power Consumption	P_{HL}	~ 900 mW	At V_H = 7.0
Heater Voltage	V_{HL}	7.0 VDC	T_{sensor} ~350°C
Heater Resistance	R_H	30Ω ± 2 Ω	At room temperature
Sensing Voltage	V_C	5.0 VDC	Recommended
Resistance in Air	R_a	30 kΩ/2.00 MΩ	Min/Max
Resistance in 50 ppm H_2S	R_{50}	1.00 kΩ/25 kΩ	Min/Max
Sensitivity (in 10 ppm H_2S)	R_a/R_{10}	2.00	Min

*Note that all measurements were made in dry gas, at room temperature

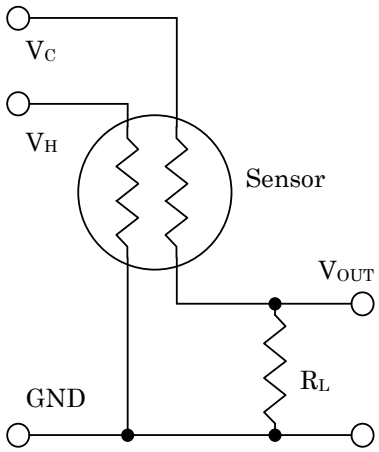
- Information on this data sheet represents typical values from a number of Synkera sensors. Actual values from sensor to sensor can vary slightly.

Operation of Synkera MOS Sensors

Synkera Technologies, Inc.
2605 Trade Centre Ave., Ste. C
Longmont, CO 80503

BASIC MEASUREMENT CIRCUIT:

The sensor can be operated using a simple voltage divider. This requires two voltage supplies: heater voltage (V_H) and circuit voltage (V_C). V_H is applied to the heater in order to maintain a constant, elevated temperature, for optimum sensing. V_C is applied to allow a measurement of the output voltage (V_{out}) across a load resistor (R_L).



Pins 1 and 3 on the TO-39 header are attached to the heater. Apply V_H across these pins.

Pins 2 and 4 on the TO-39 header are attached to the resistive sensor element. Connect these pins in the measuring circuit.

Synkera supplies basic measurement circuitry for many of our sensors. Please inquire or refer to our website for information regarding circuitry for your application

SENSOR RESISTANCE CALCULATION:

Sensor Resistance (Rs) is calculated using the following formula:

$$R_s = \frac{V_C - V_{out}}{V_{out}} * R_L$$

SENSOR PIN OUT:
