

SENSOR FEATURES:

- High sensitivity to a wide range of flammable gases.
- Non-specific response, calibration factors available upon request.
- Typical response time < 1 minute to 90% full scale.
- Environmental temperature range of -20 to 50°C.
- Minimal response to environmental humidity over the range of 0 – 95%, non-condensing
- Rugged, reliable sensor based on Synkera's exclusive technology.

Sensor Resistance as a function of concentration for several flammable gases

Typical sensor response to propane in a humid environment

ELECTRICAL CHARACTERISTICS

The electrical properties below are typical for Flammable Gas Sensors. If the actual values differ the customer will be notified with the shipment. Circuits are available that will be preset to the correct values.

PROPERTY	SYMBOL	VALUE	REMARKS
Heater Power Consumption	P_H	~ 900 mW	At $V_H = 7.0V$
Heater Voltage	V_H	5.3 VDC	$T_{\text{sensor}} \sim 300^\circ\text{C}$
Heater Resistance	R_H	$30 \Omega \pm 2 \Omega$	At room temperature
Sensing Voltage	V_C	5.0 VDC	Recommended
Resistance in Air	R_a	100 k Ω /10 M Ω	Min/Max
Resistance in 5000 ppm C_3H_8	R_{5000}	10 k Ω /1 M Ω	Min/Max
Sensitivity	R_a/R_{5000}	10	Min

*Note that all measurements were made in dry air, at room temperature

BASIC MEASUREMENT CIRCUIT:

The sensor can be operated using a simple voltage divider. This requires two voltage supplies: heater voltage (V_H) and circuit voltage (V_C). V_H is applied to the heater in order to maintain a constant, elevated temperature, for optimum sensing. V_C is applied to allow a measurement of the output voltage (V_{out}) across a load resistor (R_L).

Pins 1 and 3 on the TO-39 header are attached to the heater. Apply V_H across these pins.

Pins 2 and 4 on the TO-39 header are attached to the resistive sensor element. Connect these pins in the measuring circuit.

Synkera supplies basic measurement circuitry for many of our sensors. Please inquire or refer to our website for information regarding circuitry for your application

SENSOR RESISTANCE CALCULATION:

Sensor Resistance (R_s) is calculated using the following formula:

$$R_s = \frac{V_C - V_{out}}{V_{out}} * R_L$$

SENSOR PIN OUT:
